

Communicative English

The language course organized by the College and Rasik Bhita is aimed at developing and refining the overall English language proficiency of the students, with a view towards empowering them with essential skills for education and work in future. This course specially helps students from vernacular-medium backgrounds (for whom the course is compulsory) as it is designed to upgrade their fluency in English language by developing their vocabulary and grammar through interactive and innovative teaching.

The course is divided primarily into two parts, the first two years are devoted to developing the learners' over-all skills in English (reading, writing, speaking, listening, and developing general proficiency in the language) while the final or third year focuses on employability skills. The ultimate objective of the course is to ensure that the learners, after their graduation, can operate confidently in the outside world. The programme equips the participants with essential skills that not only boost their confidence levels, but also enhances their chances of getting good jobs and to take on higher degrees. Through interactive modules it prepares them to face interviews and to connect with people across geographies.

During the pandemic, the earlier mode of offline teaching was converted into an online mode, maintaining the regularity of classes and lesson plans on one hand and including innovative audio-visual techniques in place of the earlier kinesthetic class activities.
